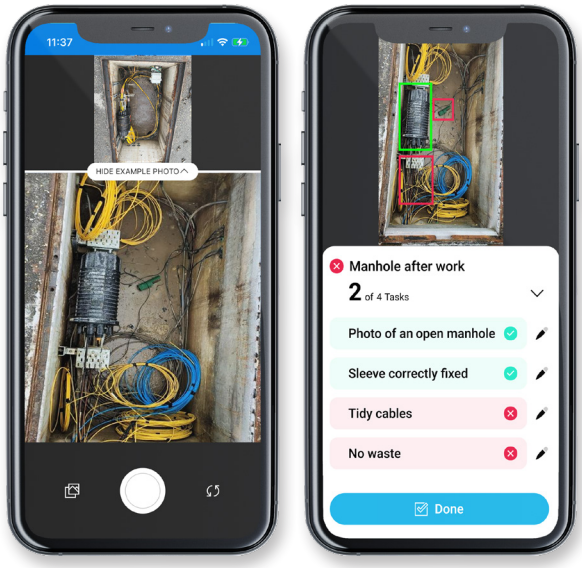
In the field

Live feedback to field worker on photo conformity and work compliance



In the office

Dedicated back-office dashboards providing access to photos, QC results and operational KPIs

Benefits

First-Time-Right field jobs

Fiber network photos are analyzed in real-time to ensure your workers perform their job right the first time.

Enriched as-builts

Get the full stack of data on network assets and their environment to create accurate as-built documentation

Accurate closeouts

Photo documentation conformity is verified in real-time to provide operator and contractor organizations reliable proof about the work done in the field

Process automation

Gain efficiency by automating processes such as contractor payment, asset inventory and asset condition monitoring.

Why NetLux AI?

Easy integration

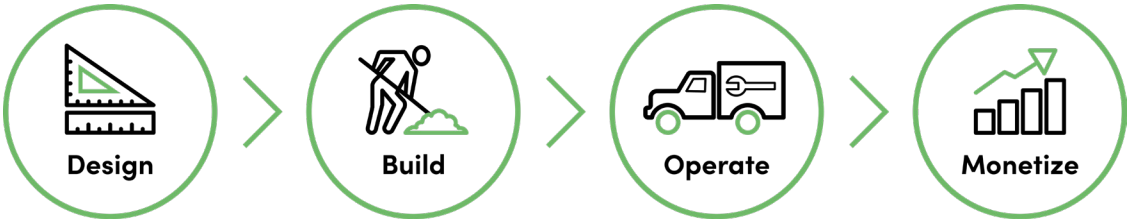
Faster implementation thanks to existing integration with IQGeo Workflow Manager, Praxedo, Zinier, Oracle, SiteTracker, Render & more

Unbeaten AI computer vision expertise

Proven expertise in telecom with off-the-shelf AI models for a faster time-to-value

IQGeo Telecom Suite: AI-powered Network Lifecycle Management

Only IQGeo enables operators to deploy and operate networks across the entire lifecycle, from planning and design to operations and sales.



- Automated planning and estimating
- Accelerated network designs
- Streamlined field reporting
- Automated quality inspection
- Maximized network revenues
- Single view of network data

Get the speed, efficiency and precision you need to deliver great service and stay ahead of the competition.
