

# AI-powered Inspection for Meter Installations

## Leverage Visual AI to Automate Meter Installation Inspections

Unexploitable photos, manual reporting of field data and remote quality control by desk engineers all hinder the efficiency of your meter installations. This leads to compliance issues and generates truck rolls. With IQGeo, you can now leverage visual AI to automate the inspection of meter installation photos and validate workmanship in real-time

### Top 3 Benefits

1

Right-first-time meter installations

2

Streamlined, reliable installation reporting

3

Cost-effective QA/QC process

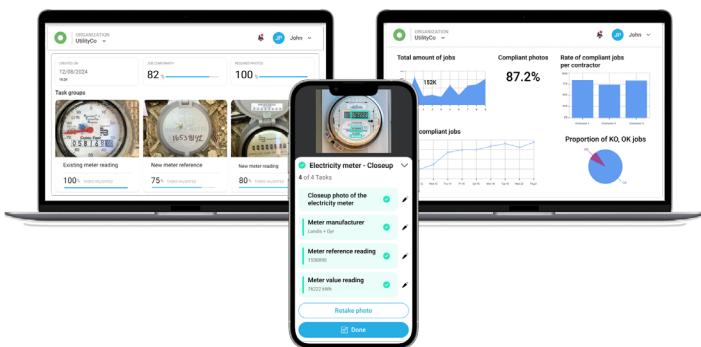

#### Old Way

VS

#### Best Practice

- ✗ Manual verification of a small portion of fiber connection reports
- ✗ Data entry errors due to manual field reporting tool
- ✗ Lack of visibility on the actual job done by your contractors' teams
- ✗ Revisits to correct installation defects

- ✓ 100% of meter installations automatically verified with AI
- ✓ Automated meter data capture and validation
- ✓ Contractor payment determined by field documentation quality and job conformity
- ✓ Instant, on-site job validation guaranteeing installation quality and safety

- Streamlined data capture experience
- Real-time feedback to technicians
- Constant data access for QA/QC and field ops managers
- Quality performance indicator monitoring
